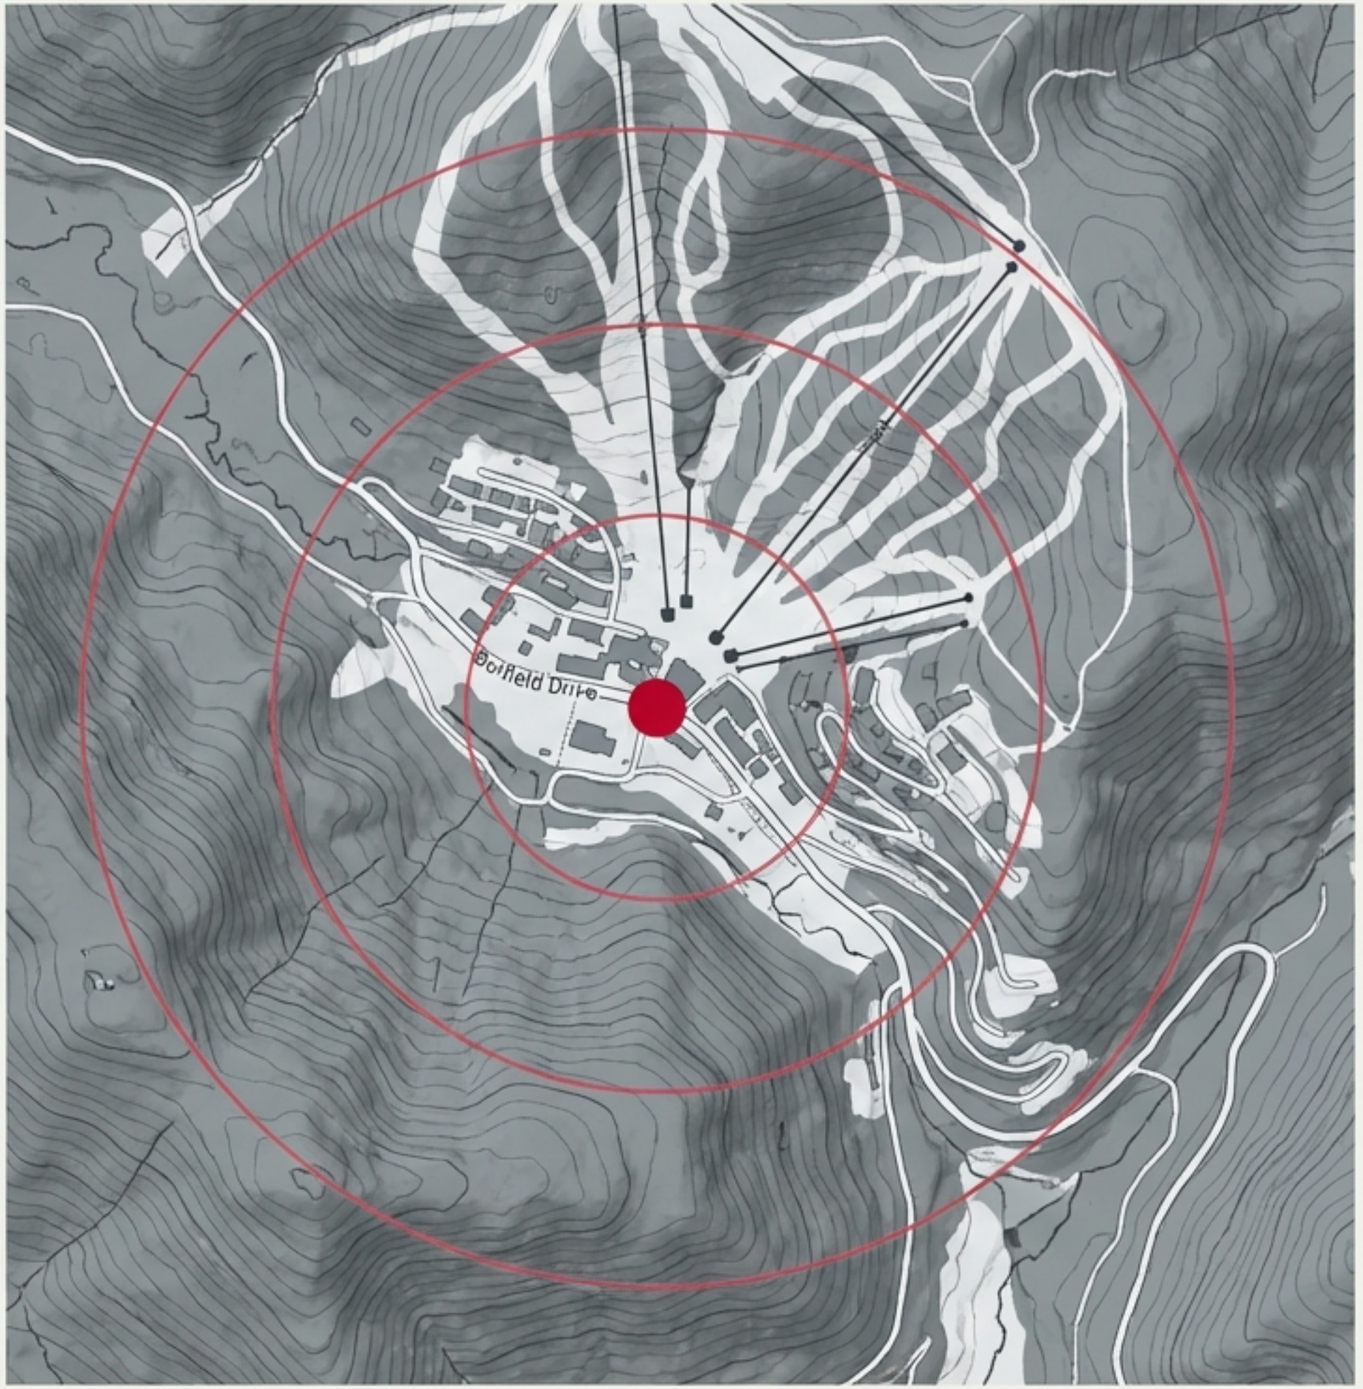
The Half-Mile Radius: A Factual Spatial Analysis of the Ryan Shtuka Disappearance

Eliminating noise to pinpoint the highest-probability zones based strictly on physical evidence and search data.



NotebookLM

Establishing Ground Zero

- **Last seen:** Residence on Burfield Drive, Sun Peaks.
- **The Boundary:** A strict 0.5-mile radius.
- **The Physics:** At -26°C (-14°F) in deep snow, an individual without extreme-weather gear faces a maximum probable travel distance on foot before succumbing to the elements.

NotebookLM

The Fact-Based Timeline: A 50 to 90-Minute Window

1:30 AM
Text message sent by Ryan indicating an imminent departure.

2:10 AM
Last verified physical sighting preparing to leave the house party.

3:00 AM
Final cell phone ping registered in the Sun Peaks local network.

NotebookLM

Route A: The 15-Minute Intended Path

Factual route home falls entirely within the 0.5-mile radius.

Terrain: Highly residential, bordered by dense, snow-laden forested areas and tree wells.

NotebookLM

Route B: The Village Deviation

Credible witness sighting in the Fairways Drive area.

Trajectory: Heading toward the village commercial center (businesses closing at 2:00 AM).

Introduces commercial infrastructure and alternative terrain into the search grid.

NotebookLM

The Environmental Constraints: Feb 16/17, 2018

Temperature: Dropped to −26°C (-14°F). Extreme hypothermia risk within minutes.

Precipitation: Up to 9 inches (22cm) of fresh snow fell overnight.

Impact: Footprints, scent trails, and dropped items were physically obscured within hours.

NotebookLM

The ‘Zero Trace’ Paradox

Ryan was a 20-year-old male, 6’0”, 180 lbs.

He left carrying keys, a wallet, and a phone. He was wearing a blue coat and a burgundy ball cap.

Fact: In over 6 years of searching, exactly zero items have been recovered.

NotebookLM

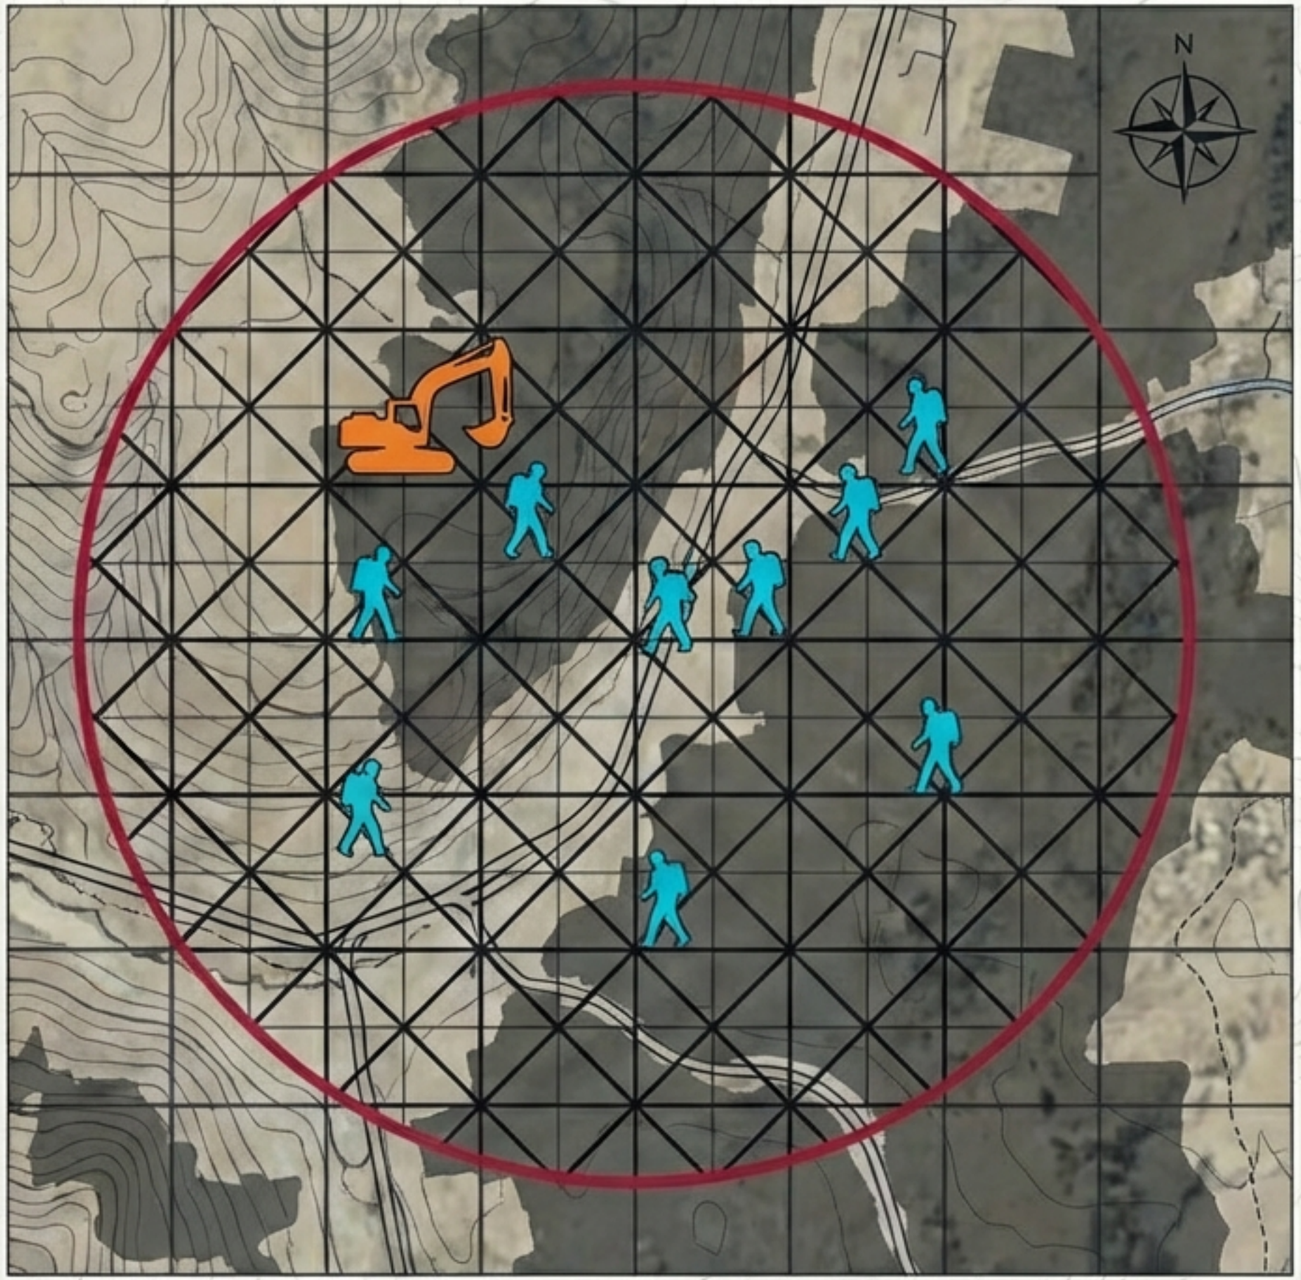
Overlaying the Search Grid: The First 48 Hours

- Resources: 22 Kamloops SAR members, 74 volunteers, helicopters.
- Technology: Infrared drones scanned for heat signatures. Result: 0 hits.
- Biology: 5 K9 units tracked the immediate vicinity. Result: 0 scent trails.

NotebookLM

Phase 2 Searches: The Spring Thaws (2018–2023)

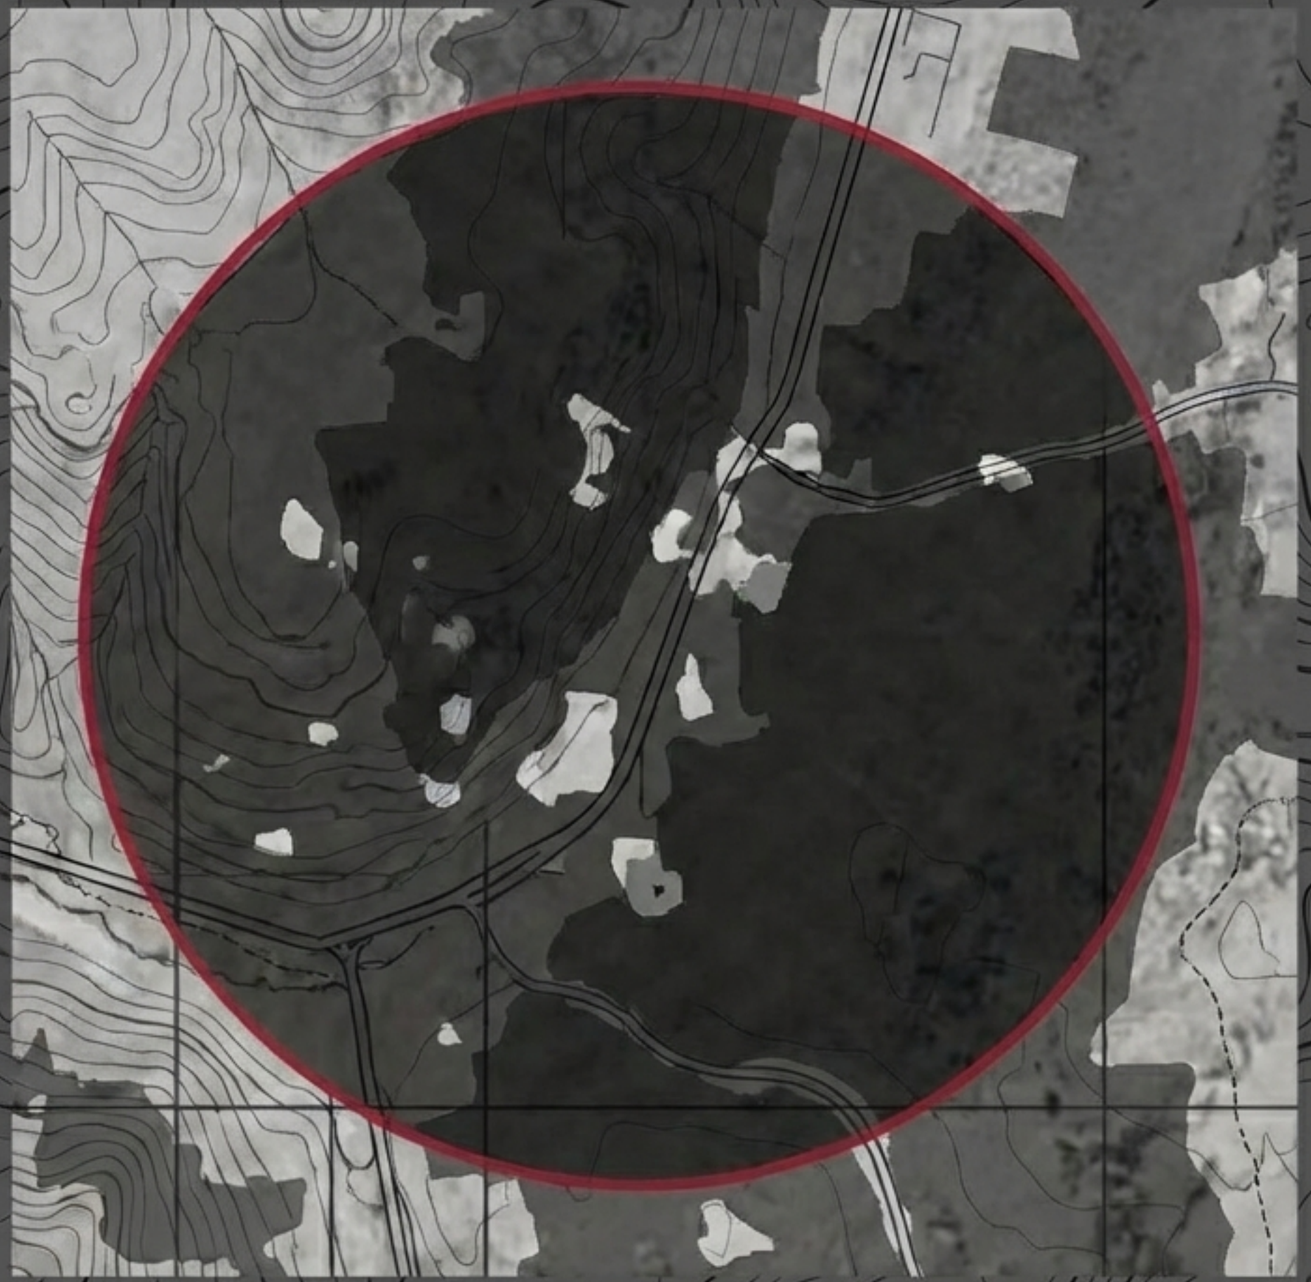
- Effort: 5 full SAR deployments, 1000+ volunteer hours.
- Methodology: Snowpack Methodology: Snowpack removal via excavators; manual probing; exhaustive grid searches.
- Result: Surface-level remains and belongings within the immediate walking paths are factually ruled out.



NotebookLM

Eliminating the Cleared Zones

- If we rely strictly on the facts of the exhaustive search efforts, we must eliminate all easily accessible and surface-level. Where inside the 0.5-mile radius remains unchecked or permanently altered? eliminated zones or interest of interest.



NotebookLM

Pinpoint Zone 1: The Construction Anomalies

Fact: The trail dropping down toward Ryan's house was subsequently closed off due to new accommodations and building construction.

Analysis: Remains covered by fresh 9-inch snow, followed rapidly by heavy foundational construction, represent a critical, unsearchable blind spot.

Pinpoint Zone 2: Deep Infrastructure & Water Pathways

Fact: The village contains culverts, a small river, and deep drainage networks.

Analysis: Under heavy snow, a disoriented individual seeking shelter from -26°C winds may bypass natural tree wells for man-made infrastructure. These structures mask K9 scents and block infrared drone detection.

NotebookLM

Pinpoint Zone 3: Vehicular Interference

Fact: A vehicle was recorded leaving the mountain at approximately 4:00 AM.

Analysis: Total absence of clothing or K9 scent within a fully searched 0.5-mile zone means if he did not succumb to natural terrain, human intervention (e.g., a hit-and-run within the radius where the body was removed) is the only remaining factual spatial exit.

The Final Heatmap

Based strictly on search data and physical facts, Ryan Shtuka is not on the surface of the natural terrain within this radius.

He is in a permanently altered man-made zone, a deep infrastructure trap, or he was removed from the radius entirely.

Factual Deductions Require Factual Leads

The search continues systematically. Focus remains on physical evidence: keys, a wallet, a phone, a burgundy cap, or a blue coat.

If you have any information regarding these pinp**oint** zones or the events of Feb 17, 2018:

❗ UPDATE – Email Account for Ryan's Search ❗

Thank you all for your help in finding Ryan. Our search continues and will not end until he his found. If you have questions about the search efforts and want information on how to help please send an email to findryanshtuka@gmail.com.

Ryan was last seen leaving a residence on Burfield Drive in Sun Peaks, BC around 2:10 am on Saturday, February, 2018 to walk a short distance home. He has not been active on social media or cellular networks since then. If you have any information regarding Ryan's disappearance, please contact KAMLOOPS RCMP at 250–828–3000, CRIMESTOPPERS at 1–800–222–8477.
