08	A palette that passes contrast	17
A	Snippets appendix	19
B	Tools, licenses, and checklist	23
★	License and credits	24

How to use this booklet is on page 3.

♡ How to use this booklet

You do not need to read it in order. Pick the chapter that matches the thing you want to make prettier today.

Meet your guides

Lil Aud-Bod is the pixel hula dancer who keeps the arcade running. **Auky** is the cheerful yellow friend with a hibiscus. They will pop up to remind you of the three golden rules of this booklet.

> **Rule 1.** Free first. Everything here works on GitHub Free.

> **Rule 2.** Readable is beautiful. Every color pair passes 4.5:1.

> **Rule 3.** Be kind and original. No copied art, no trackers.

Lil Aud-Bod

Auky

How the chapters connect

1 GitHub settings → 2 Extensions → 3-4 Profile and Actions → 5-6 Repos and Pages → 7-8 Everywhere else

Checked on 2026-11-12

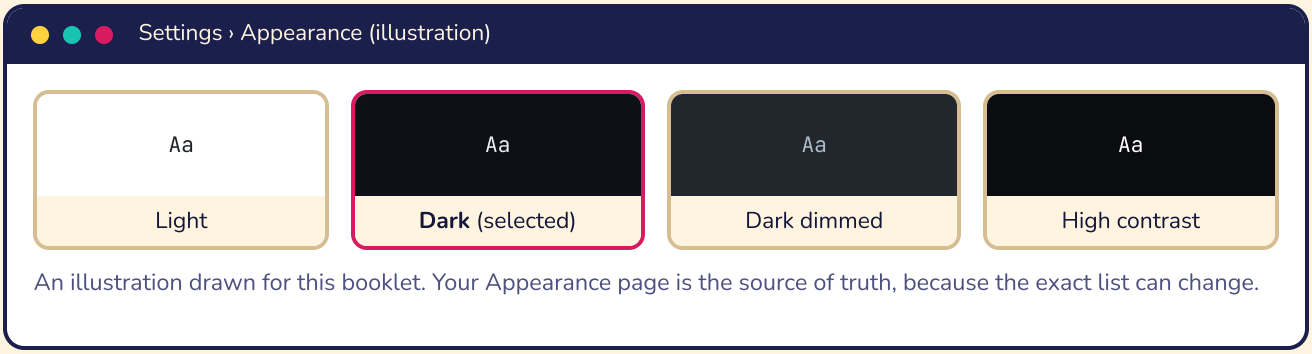

All the links, licenses and settings in this booklet were checked on 2026-11-12. Websites change, so if a button has moved, trust the live page over the picture. Nothing in this booklet contains affiliate links or tracking links.

01 Start with GitHub's own settings

The fastest glow-up is already inside GitHub. It is free, instant, and it follows you to every browser you sign in on.

Pick a theme that fits your eyes

Open your profile picture menu, choose **Settings**, then **Appearance**. You can choose one theme, or switch on **Sync with system** and pick a day theme and a night theme. Themes can also be changed from the command palette.

An illustration drawn for this booklet. Your Appearance page is the source of truth, because the exact list can change.

Setting	What it does
Light default, Dark default	The baseline themes. Visitors who are signed out see these.
Dark dimmed	An intentionally softer, lower-contrast dark theme.
Light and Dark high contrast	More contrast for low vision.
Colorblind variants (Protanopia and Deuteranopia, Tritanopia)	Swap colors that are hard to tell apart for ones that are easier. Tritanopia is the blue/yellow variant.
Increase contrast switch	Added in June 2025. A separate toggle that raises contrast on any theme, and signed-out visitors can reach it from the top navigation Appearance button.
Accessibility settings	Link underlines, hovercards on or off, keyboard shortcut character keys, and autoplay of animated images (sync with system, on, or off).

> **Heads up:** Theme and contrast are separate choices since the June 2025 change. If you later add a userstyle such as the Catppuccin GitHub style (Chapter 2), it asks for the *Light default* or *Dark default* theme with *Increase contrast* switched off. Pick one path: a userstyle look **or** a built-in accessibility theme.

Five-minute settings tour

1. Settings, Appearance: choose **Sync with system** and pick a day theme and a night theme.

2. Try **Dark dimmed** at night. Many people find it easier on the eyes than full dark.
3. Open the **Accessibility** page and decide on link underlines and animated images.
4. Pin your six best repositories to your profile (Chapter 5).
5. Add a profile README (Chapter 3).

> **Free check:** Nothing in this chapter needs a paid GitHub plan.

Sources, checked 2026-11-12: GitHub Docs "Managing your theme settings"; GitHub Docs "Managing accessibility settings"; GitHub changelog, 5 June 2025, "Control contrast for all GitHub themes"; GitHub changelog, 19 April 2022, tritanopia colorblind theme.

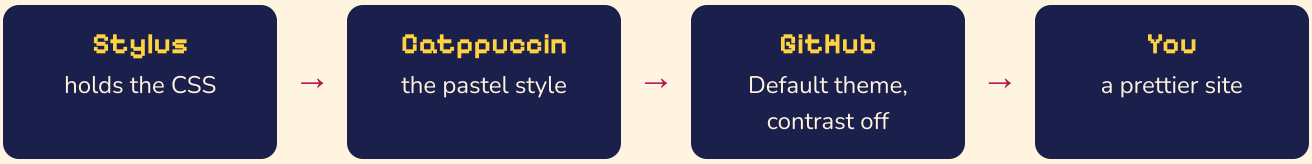

02 Extensions and userstyles

A few small tools can make GitHub feel like a different site. All of these are free and open source, and none needs a paid GitHub plan.

Tool	What it does	License	Safety note
Stylus	Userstyle manager. Applies CSS themes to any site, including GitHub.	GPL-3.0	It needs access to the pages you style, so install styles only from sources you trust, and read the CSS if unsure.
Catppuccin userstyles for GitHub	Soothing pastel theme with four flavors (Latte, Frappé, Macchiato, Mocha) and 15 accent colors, including Pink, Peach and Teal.	MIT	Needs GitHub's Default theme with Increase contrast off.
Dracula for GitHub	The dark Dracula userstyle.	MIT	Only the open Dracula theme is MIT. Dracula Pro is proprietary.
Refined GitHub	Cleans up the interface and adds many small features.	MIT	A browser extension with access to github.com. Chrome, Firefox and Safari.
Material Icons for GitHub	Swaps file and folder icons for the Material icon set.	MIT	Open source. Store listing says no data is collected.
Gitako	A file tree in the sidebar.	MIT	Needs a token for private repositories.
Isometric Contributions	Turns the contribution graph into a 3D isometric view.	MIT	Browser extension.
userstyles.world	A community library of userstyles.	Varies	Community content. Read each style's license and code first.

The 5-minute install recipe

1. Install **Stylus** from the Chrome Web Store or Firefox Add-ons.
2. Follow the Catppuccin usage guide and import the GitHub style.
3. In the Catppuccin customizer, choose light = Latte, dark = Mocha, accent = Pink or Peach.
4. In GitHub Settings, Appearance, choose **Light default** and **Dark default**, with **Increase contrast** off.
5. Add **Material Icons for GitHub** and **Refined GitHub**.

How the pieces fit together.

> **Be careful with Dark Reader.** Dark Reader rewrites page colors and can fight with Stylus themes. GitHub already has real dark themes, so you do not need it there. If you use both, disable Dark Reader on sites you style with Stylus.

> **Skip the old one.** The `catppuccin/github` repository is archived (last push 2023). Its replacement is `catppuccin/userstyles`.

Rules of thumb for any extension

- Prefer open-source extensions you can read, with a recent update date.
- Check which sites an extension can read. Optional permissions should stay optional.
- Userstyles are CSS, and CSS can change how a page looks to you. Install only from sources you trust.
- If GitHub changes its page structure, userstyles can break for a few days. That is normal.

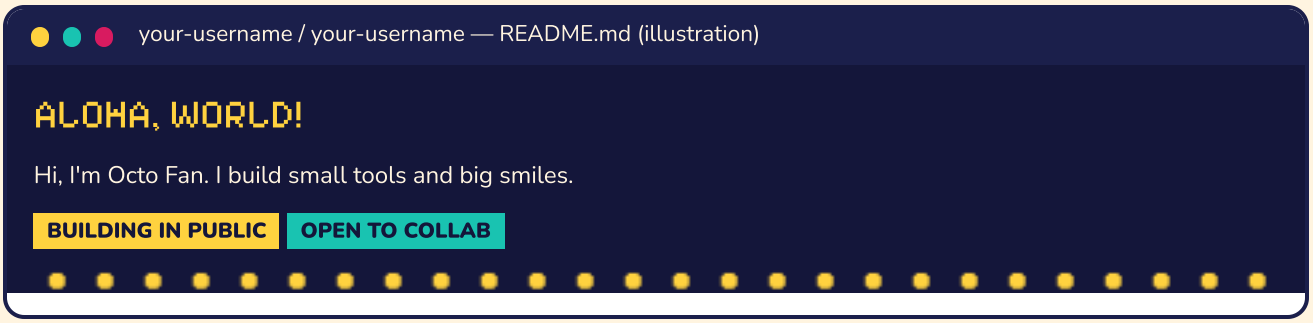

Sources, checked 2026-11-12: Chrome Web Store and Firefox Add-ons listings for Stylus; github.com/openstyles/stylus; userstyles.catppuccin.com; github.com/catppuccin/userstyles; github.com/refined-github/refined-github; github.com/material-extensions/material-icons-browser-extension; github.com/EnixCoda/Gitako; github.com/jasonlong/isometric-contributions; userstyles.world.

03 Your profile README

Your profile is the first page people see. A good README turns it from a list of repositories into a welcome mat.

How it works

1. Create a **public** repository whose name is exactly your username. For `octo-fan` that is `octo-fan/octo-fan`.
2. Add a `README.md` to it.
3. GitHub shows that file at the top of your profile. It works on GitHub Free.

The anatomy of a friendly profile: banner, one-line pitch, status badges, divider, then the good stuff.

The ingredients

Ingredient	Why it helps
A light and dark banner	Looks right in both modes. See the `<picture>` snippet in Appendix A.
A one-line pitch	Visitors decide in seconds. Say what you build and what you love.
Alert callouts	`> [!NOTE]` and friends are native Markdown. GitHub suggests one or two per article.
Skill and status badges	Quick to scan. Use words, not just colors.
A snake and a stats card	Drawn by GitHub Actions as static pictures (Chapter 4).
Alt text on every image	Screen readers cannot see the picture. Describe it in a short sentence.

Popular widgets, and the problem with them

Many profile READMEs use pictures that are drawn by someone else's server each time a visitor loads the page. That is convenient until the server is busy. When this booklet was researched on **2026-11-12**, the public `github-readme-stats` endpoint answered with an HTTP 503 error and the public `github-readme-activity-graph` endpoint answered with HTTP 402. The first project's own README

says the public instance is best-effort and can be unreliable. A broken-image icon at the top of your profile is the opposite of gorgeous.

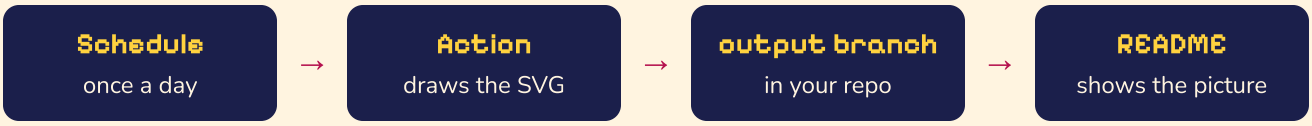

> **The fix:** Have a GitHub Action draw the picture once a day, and save it as a static SVG file in your own repository. Chapter 4 shows how.

Tool	License	Notes
capsule-render (wave banners)	MIT	Hosted on vercel.app. Fine for decoration. For zero dependency, export a static SVG.
github-readme-streak-stats	MIT	Hosted endpoint answered 200 on test day. It documents a self-hosted or Action option.
skill-icons	MIT	Logos belong to their owners. Fine for "I use X", not for your own branding.
github-profile-summary-cards	MIT	Generates SVGs in your repo with an Action.
shields.io badges	Apache-2.0	Badge text is public URL data. Static badges are safest.
Profile view counters	MIT	A hit counter is third-party tracking of your visitors. This booklet recommends skipping it.

Sources, checked 2026-11-12: GitHub Docs "Managing your profile README"; each project's GitHub repository and README; live endpoint tests on 2026-11-12.

04 Static SVGs with GitHub Actions

Let a robot draw your pictures once a day and save them in your own repository. They never break, they cost nothing, and nobody tracks your visitors.

The whole idea in four boxes.

Example: the contribution snake

The `Platane/snk` project draws your contribution graph as a snake. Use it as a published Action. The repository has **no license file**, so use the Action as documented and do **not** copy its code into a product or into your own repository.

1. In your profile repository, create `.github/workflows/snake.yml` and paste the workflow from Appendix A.
2. Open the **Actions** tab, choose **Generate snake**, then **Run workflow**.
3. When the run is green, a new branch called `output` holds `snake.svg` and `snake-dark.svg`.
4. Add the snake snippet from Appendix A to your README, and replace `YOUR-USERNAME` twice.

Hardening rules for every Action

1. **Prefer static SVG in your repo** over a hosted URL. The README never breaks when a free host hits its quota.
2. **Pin third-party Actions to a full commit SHA**, not a moving tag. The SHA in the snippet is the v3.5.0 release of snk.
3. **Give tokens the fewest scopes possible.** The built-in `GITHUB_TOKEN` is enough for most things.
4. **Public-repository Actions are free.** A profile repository is public, so it costs nothing. Private repositories draw from your monthly free minutes.
5. **Always add alt text** and keep animation modest.

How to find a full commit SHA

```
# Find the full commit SHA of an Action release (needs the GitHub CLI, `gh`)
gh api repos/Platane/snk/commits/v3.5.0 --jq .sha
```

Or open the Action's repository, click the release tag, and copy the full 40-character commit hash.

Troubleshooting

Symptom	Try this
Broken image in the README	Run the workflow once. Check the `output` branch exists and that `YOUR-USERNAME` is replaced.
The workflow fails with 403 when pushing	Settings, Actions, General, Workflow permissions: choose *Read and write permissions*.
Nothing updates for months	GitHub pauses scheduled workflows in public repositories after 60 days without repository activity. Re-enable them in the Actions tab.
You want your own colors	The snk `outputs` lines accept `color_snake`, `color_dots` (five colors) and `color_background`. Use `%23` for `#`.

> **Want it ready-made?** The Hula Arcade GitHub Profile README Kit from AudreyBuildsAI (sold separately) ships three layouts, pixel banners, and tested workflows for the snake and a stats card.

Sources, checked 2026-11-12: github.com/Platane/snk (README and action.yml); GitHub Docs "Secure use reference" and "Billing and usage".

05 Repository README design

Every repository is a tiny website. A few native Markdown tricks make yours look cared for.

Technique	How
Light and dark images	The `<picture>` element with a `prefers-color-scheme: dark` source. GitHub supports it.
Alert callouts	`> [!NOTE]`, `[!TIP]`, `[!IMPORTANT]`, `[!WARNING]`, `[!CAUTION]`. Use one or two per article.
Diagrams	Mermaid code blocks render natively in Markdown.
Color chips	In issues, pull requests and discussions, a color such as `#D81B60` in backticks shows a swatch. This does not work in repository Markdown files.
Banners	A README header SVG, and a 1280 × 640 social preview image for link cards.
GIF demos	Keep them short, compressed and captioned. Viewers can turn autoplay off.
Pinned repositories	Pin up to six on your profile.
Organization profile	An organization can have its own README and profile.
Rendered docs	`github-markdown-css` (MIT) makes your own HTML docs look like GitHub Markdown.

A light and dark banner

```
<picture>
  <source media="(prefers-color-scheme: dark)" srcset="assets/banner-dark.svg">
  <img alt="A short description of the banner" src="assets/banner-light.svg" width="100%">
</picture>
```

Put two versions of the same banner in an `assets` folder. Visitors in dark mode see the dark file. Always fill in `alt`.

Alert callouts

```
> [!NOTE]
> Useful information that readers should know, even when skimming.

> [!TIP]
> Helpful advice for doing things better or more easily.

> [!IMPORTANT]
> Key information readers need to succeed.

> [!WARNING]
> Urgent info that needs immediate attention to avoid problems.

> [!CAUTION]
> Advises about risks or negative outcomes of certain actions.
```

A diagram

````
```mermaid
flowchart LR
    A[Idea] ⟶ B[Prototype]
    B ⟶ C[Ship]
    C ⟶ D[Learn]
    D ⟶ A
```
````

GitHub draws this as a flow chart: Idea, Prototype, Ship, Learn, and back to Idea.

> **Social preview:** Open the repository Settings and upload a 1280 × 640 image under Social preview. Links you share then carry your banner.

Sources, checked 2026-11-12: GitHub Docs "Basic writing and formatting syntax", "Creating diagrams", "Customizing your repository's social media preview", "Pinning items to your profile", "Customizing your organization's profile"; github.com/sindresorhus/github-markdown-css.

06 GitHub Pages themes

Pages turns a repository into a free website. Built-in themes make a good-looking docs site in minutes.

Built-in Jekyll themes

GitHub Pages supports these themes: Architect, Cayman, Dinky, Hacker, Leap day, Merlot, Midnight, Minima, Minimal, Modernist, Slate, Tactile and Time machine.

1. Open your repository Settings and choose **Pages**.
2. Pick a source branch.
3. Add a `_config.yml` file with the theme name, like this:

```
theme: jekyll-theme-cayman
title: My Project
description: A short line about what this site is for.
```

Each built-in theme has the prefix `jekyll-theme-` in front of its name. The list and the exact names are on the Pages themes page.

Question	Answer
Who can use Pages?	Public repositories on GitHub Free. Pages on private repositories needs Pro, Team or Enterprise (paid).
What are the limits?	A 1 GB site, a soft 100 GB per month of bandwidth, and a soft limit of 10 builds per hour (not for custom Actions deploys).

> **Do not sell from Pages.** GitHub says Pages is not allowed as free hosting for a site that is primarily directed at facilitating commercial transactions. A portfolio and free documentation are fine. A storefront is not. Sell on a marketplace such as Gumroad, Etsy or Ko-fi.

Good uses for Pages

- A project showcase with screenshots and a live demo.
- Free documentation for an open-source tool.
- A portfolio that links to your best work.

Sources, checked 2026-11-12: pages.github.com/themes; GitHub Docs "About GitHub Pages" and "GitHub Pages limits".

07 Beyond GitHub

When something arrives black and generic, look for the supported way to make it yours first. These are the highest-impact tricks for the tools developers use most.

Tool	Highest-impact trick
VS Code and Cursor	Install one good color theme plus one icon theme, and set a matching font. The settings keys are `workbench.colorTheme`, `workbench.iconTheme` and `workbench.colorCustomizations`. Cursor is a VS Code fork and uses the Open VSX registry.
Code fonts	Cascadia Code or Fira Code. Both use open font licenses. Check each repository's license before bundling a font in anything you sell.
Windows Terminal	Add a scheme to the `schemes` list in `settings.json`, then set `colorScheme`. Install a Nerd Font for prompt glyphs.
Starship	A cross-shell prompt (ISC license). Presets and palettes make it look the way you like.
oh-my-posh	An alternative prompt engine (MIT) with many themes. Needs a Nerd Font.
Notion	No custom CSS or accent color. Beauty comes from covers, page icons, custom emoji, colored callouts, font choice and full-width pages.
Linear	Settings, Preferences, Interface and theme, Custom theme: pick a base color, an accent color and a contrast level. Linear builds the whole theme from those three.
Gmail	Settings gear, Themes, View all. Pick a theme or your own background image.
Chrome	New tab, Customize Chrome side panel: theme, browser color and background image.
Windows 11	Settings, Personalization, Colors and Themes. Accent color, dark mode, and accent color on Start and the taskbar.

VS Code settings, copy and paste

```
{
  "workbench.colorTheme": "Default Dark Modern",
  "workbench.iconTheme": "vs-seti",
  "window.autoDetectColorScheme": true,
  "workbench.preferredDarkColorTheme": "Default Dark Modern",
  "workbench.preferredLightColorTheme": "Default Light Modern",
  "editor.fontFamily": "'Cascadia Code', 'Fira Code', monospace",
  "editor.fontLigatures": true,
  "workbench.colorCustomizations": {
    "statusBar.background": "#D81B60",
    "statusBar.foreground": "#FFF4E0"
  }
}
```

This follows your operating system's day and night mode and tints the status bar hibiscus pink with cream text (contrast 4.54:1).

A Windows Terminal color scheme

Paste this object into the `schemes` list of your `settings.json`, then set `"colorScheme": "Hula Arcade Night"` in a profile.

```
{
  "name": "Hula Arcade Night",
  "background": "#14163A",
  "foreground": "#FFF4E0",
  "cursorColor": "#FFD23F",
  "selectionBackground": "#3A4090",
  "black": "#2A2F6E",
  "red": "#FF7FA8",
  "green": "#8EE59A",
  "yellow": "#FFD23F",
  "blue": "#8FB4FF",
  "purple": "#B8A1FF",
  "cyan": "#19C3B1",
  "white": "#FFF4E0",
  "brightBlack": "#A9A8D6",
  "brightRed": "#FF9EBC",
  "brightGreen": "#B4F2BC",
  "brightYellow": "#FFE27A",
  "brightBlue": "#B3CCFF",
  "brightPurple": "#D3C4FF",
  "brightCyan": "#7FE3D8",
  "brightWhite": "#FFFFFF"
}
```

> **Safety defaults:** Prefer supported settings over patchers. Never use anything that replaces Windows system files, and test system-level mods on a restore point or a throwaway virtual machine first.

Sources, checked 2026-11-12: VS Code theme docs; Microsoft Learn Windows Terminal color schemes; starship.rs; ohmyposh.dev; Notion help center; Linear docs; Google support pages for Gmail and Chrome; Microsoft Support personalization pages.

08 A palette that passes contrast

Pretty is not enough. If people cannot read it, it is not gorgeous. This chapter shows the Hula Arcade palette and how to check any palette yourself.

NAVY #1B1F4B	DEEP INK #14163A	PELLET YELLOW #FFD23F	LAGOON TEAL #19C3B1	HIBISCUS #D81B60	SAND CREAM #FFF4E0	LEI LAVENDER #B8A1FF

The rule

The Web Content Accessibility Guidelines (WCAG 2.2) ask for a contrast ratio of at least **4.5:1** for normal text, and **3:1** for large text and user-interface parts. You can check any pair in the WebAIM contrast checker.

Text color	On	Ratio	Result
Cream	Deep ink	15.98:1	pass
Cream	Navy	14.33:1	pass
Pellet yellow	Deep ink	12.06:1	pass
Lagoon teal	Deep ink	7.87:1	pass
Lei lavender	Deep ink	7.95:1	pass
Deep ink	Sand cream	15.98:1	pass
Deep ink	Pellet yellow	12.06:1	pass
Deep ink	Lagoon teal	7.87:1	pass
Deep ink	Lei lavender	7.95:1	pass
Hibiscus	Sand cream	4.54:1	pass
Sand cream	Hibiscus	4.54:1	pass
Hibiscus	Deep ink	3.52:1	large text only
Lagoon teal	Sand cream	2.03:1	large text only
Lei lavender	Sand cream	2.01:1	large text only

> **Teal and lavender are for fills.** Lagoon teal and lei lavender are lovely backgrounds with dark text, and lovely accents on dark. They are too faint as small text on cream. Hibiscus on cream passes by a hair (4.54:1), so keep it for headings and bold words.

Design rules that keep it beautiful and kind

- Never use color alone to carry meaning. Add an icon or a word. This also helps colorblind viewers.
- Ship a dark and a light version of everything.
- Keep any animation under three seconds and offer a still version.
- Use original art. If your style is retro arcade, invent your own characters and shapes instead of borrowing famous ones.
- If you show a living cultural tradition such as hula, show it respectfully: flowers, ocean and music, never a caricature.

Contrast ratios were computed with the WCAG formula. Check again in a contrast checker before you ship.

A Snippets appendix

Copy and paste. Every snippet in this booklet was checked: YAML with a workflow linter, JSON and TOML with parsers. If copying from the PDF adds a line break inside a long line, use the plain files in the `snippets` folder of your download instead.

A1. Light and dark banner

```
<picture>
  <source media="(prefers-color-scheme: dark)" srcset="assets/banner-dark.svg">
  <img alt="A short description of the banner" src="assets/banner-light.svg" width="100%">
</picture>
```

A2. The five alert callouts

```
> [!NOTE]
> Useful information that readers should know, even when skimming.

> [!TIP]
> Helpful advice for doing things better or more easily.

> [!IMPORTANT]
> Key information readers need to succeed.

> [!WARNING]
> Urgent info that needs immediate attention to avoid problems.

> [!CAUTION]
> Advises about risks or negative outcomes of certain actions.
```

A3. A Mermaid diagram

````
```mermaid
flowchart LR
    A[Idea] ⟶ B[Prototype]
    B ⟶ C[Ship]
    C ⟶ D[Learn]
    D ⟶ A
```
````

A4. Snake workflow (.github/workflows/snake.yml)

```
name: Generate snake
on:
  schedule:
    - cron: "0 4 * * *"
  workflow_dispatch:
permissions:
  contents: write
jobs:
  snake:
    runs-on: ubuntu-latest
    steps:
      - name: Draw the snake
        uses: Platane/snk/svg-only@d8f6715049803e982ee5ff501b6b9b7d5deeb09b # v3.5.0
        with:
          github_user_name: ${{ github.repository_owner }}
          outputs: |
            dist/snake.svg
            dist/snake-dark.svg?palette=github-dark
      - name: Publish to the output branch
        env:
          GITHUB_TOKEN: ${{ secrets.GITHUB_TOKEN }}
        run: |
          cd dist
          git init -q -b output
          git config user.name "github-actions[bot]"
          git config user.email "41898282+github-actions[bot]@users.noreply.github.com"
          git add .
          git commit -q -m "chore: update snake"
          git push -q -f "https://x-access-
token:${GITHUB_TOKEN}@github.com/${GITHUB_REPOSITORY}.git" HEAD:output
```

The last step force-pushes only the throwaway `output` branch that holds generated pictures. It never touches your main branch.

A5. Snake in your README

```
<picture>
  <source media="(prefers-color-scheme: dark)" srcset="https://raw.githubusercontent.com/YOUR-
USERNAME/YOUR-USERNAME/output/snake-dark.svg">
  <img alt="A snake eating my contribution graph" src="https://raw.githubusercontent.com/YOUR-
USERNAME/YOUR-USERNAME/output/snake.svg" width="100%">
</picture>
```

A6. VS Code settings

```
{
  "workbench.colorTheme": "Default Dark Modern",
  "workbench.iconTheme": "vs-seti",
  "window.autoDetectColorScheme": true,
  "workbench.preferredDarkColorTheme": "Default Dark Modern",
  "workbench.preferredLightColorTheme": "Default Light Modern",
  "editor.fontFamily": "'Cascadia Code', 'Fira Code', monospace",
  "editor.fontLigatures": true,
  "workbench.colorCustomizations": {
    "statusBar.background": "#D81B60",
    "statusBar.foreground": "#FFF4E0"
  }
}
```

A7. Windows Terminal scheme

```
{
  "name": "Hula Arcade Night",
  "background": "#14163A",
  "foreground": "#FFF4E0",
  "cursorColor": "#FFD23F",
  "selectionBackground": "#3A4090",
  "black": "#2A2F6E",
  "red": "#FF7FA8",
  "green": "#8EE59A",
  "yellow": "#FFD23F",
  "blue": "#8FB4FF",
  "purple": "#B8A1FF",
  "cyan": "#19C3B1",
  "white": "#FFF4E0",
  "brightBlack": "#A9A8D6",
  "brightRed": "#FF9EBC",
  "brightGreen": "#B4F2BC",
  "brightYellow": "#FFE27A",
  "brightBlue": "#B3CCFF",
  "brightPurple": "#D3C4FF",
  "brightCyan": "#7FE3D8",
  "brightWhite": "#FFFFFF"
}
```

A8. A tiny Starship preset (~/.config/starship.toml)

```
palette = "hula"
add_newline = true

[character]
success_symbol = "[●](bold pellet) [❯](bold lagoon)"
error_symbol = "[✖](bold hibiscus) [❯](bold hibiscus)"

[directory]
style = "bold lagoon"
truncation_length = 3

[palettes.hula]
pellet = "#FFD23F"
lagoon = "#19C3B1"
hibiscus = "#FF7FA8"
```

A9. GitHub Pages theme (_config.yml)

```
theme: jekyll-theme-cayman
title: My Project
description: A short line about what this site is for.
```

A10. Find an Action's commit SHA

```
# Find the full commit SHA of an Action release (needs the GitHub CLI, `gh`)
gh api repos/Platane/snk/commits/v3.5.0 --jq .sha
```

B Tools and licenses

Licenses were read from each project on 2026-11-12. Always re-check before you redistribute anything.

Tool	License	Notes
Stylus	GPL-3.0	Userstyle manager
Catppuccin userstyles	MIT	Keep their notice if you remix
Dracula (open theme)	MIT	Dracula Pro is proprietary
Refined GitHub	MIT	
Material Icons for GitHub	MIT	
Gitako	MIT	
Isometric Contributions	MIT	
capsule-render	MIT	
github-readme-stats	MIT	Public instance can be unreliable
github-readme-streak-stats	MIT	
github-readme-activity-graph	MIT	
skill-icons	MIT	Logos belong to their owners
readme-typing-svg	MIT	
github-profile-summary-cards	MIT	
shields.io	Apache-2.0	
Simple Icons	CC0 (code)	Logos remain their owners' trademarks
Platane/snk	**No license file**	Use as an Action only. Do not copy its code.
lowlighter/metrics	MIT	Needs a personal access token
github-markdown-css	MIT	
Starship	ISC	
oh-my-posh	MIT	
Cascadia Code, Fira Code	Open font licenses	Check before bundling

Appendix C. Glow-up checklist

- ☐ Sync GitHub with your system and pick day and night themes
- ☐ Create the profile repository and README
- ☐ Static SVG snake and stats via Actions
- ☐ Add Material Icons and Refined GitHub
- ☐ Social preview image on your best repo
- ☐ Pin six repositories
- ☐ Light and dark banner with alt text
- ☐ Pin every Action to a full SHA
- ☐ Check every text color at 4.5:1
- ☐ Skip hit counters and trackers

Your license

- You may read this booklet on any device you own and print it for your own use.
- You may use the code snippets in Appendix A in your own projects, personal or commercial, under the MIT License (the snippets only; no warranty).
- You may not resell, share, post, or give away this PDF or pages from it.
- Teammates each need their own copy.

Credits

- Pixel art, illustrations and the 5×7 pixel font were drawn from scratch for AudreyBuildsAI. Mascots: Lil Aud-Bod (the pixel hula dancer) and Auky (the yellow friend with the hibiscus).
- Fonts used in this PDF, all under the SIL Open Font License 1.1: Pixelify Sans, Press Start 2P, Nunito, and JetBrains Mono (Google Fonts).
- Third-party tools mentioned keep their own licenses. Appendix B lists them.

Trademarks and no affiliation

GitHub is a trademark of GitHub, Inc. Visual Studio Code, Windows Terminal and Windows are trademarks of Microsoft. All other names belong to their owners. This booklet is independent and is not affiliated with, endorsed by, or sponsored by them. The interface pictures in this booklet are drawn illustrations, not screenshots.

No warranty

This booklet is provided as is, and websites change. Prices, settings and links were checked on 2026-11-12. This is not legal advice. Confirm license and trademark questions before you sell or redistribute anything.

Refunds

If this booklet is not right for you, ask for a refund within 14 days of purchase.
