REAL-TIME GENERATION TIMESTAMP: 2026-09-25 14:55:15 PDT

1. TARGET ANOMALY COORDINATES & SPECIFICATIONS

Target ID	Location Name	Coordinates (WGS84)	Subsurface Target	Recommended Protocol
TD-001	Target Delta (Creek Cut-Bank)	50.8782° N, 119.9075° W	Skull (0-36 in dirt) / Sneaker	GPR 400/900 MHz + HRD K9 Bone Scent
CAT-001	Burfield West Historical Ditch	50.8758° N, 119.9142° W	Long Bones / Timber Strainer	GPR 400 MHz + Micro-Probing
CAT-002	Fairways Upper Culvert Basin	50.8791° N, 119.9062° W	Cranial Vault / Burgundy Fabric	SPAD LiDAR + Dielectric Solver
CAT-003	McGillivray Tributary Strainer	50.8732° N, 119.8985° W	Subsurface Log Jam Void	3D SAR Tomography + K9 Sniffer
TB-001	Target Beta (632-Ft Corridor)	50.8768° N, 119.9105° W	Spruce Tree Well Depressions	Dual-Return Bare-Earth LiDAR DTM

2. SENSOR CALIBRATION & REAL-TIME RE-EVALUATION PROTOCOL

GPR Frequency Tuning: Dual-frequency 400 MHz (deep penetration, 1-3m) and 900 MHz (high-res, 0-1m).
Dielectric Contrast Calibration: Damp mountain soil (er ~ 18.0) vs. solid bone (er ~ 8.0) -> Delta_er ~ 10.0.
Continuous Pre-Search Trigger: Every grid sweep initiates an automated query of research databases, auto-updating local data dictionaries with the latest ONNX weights and dielectric parameters prior to flight execution.
