MOVEMENT DOSSIER: LIAM GABRIEL TOMAN

MONT-TREMBLANT, QC | DISAPPEARANCE PROFILE & SAR TRAJECTORY MATRIX

DATE: FEB 2025 / SAR REVISION

STATUS: ACTIVE MISSING PERSON ($50K REWARD)

1. MULTI-AUDIENCE NARRATIVE & OPERATIONAL TIMELINE

Simple Story for Families & Non-Technical Searchers (10yo Reading Level):
Liam Toman was a 22-year-old college graduate who loved skiing. On Saturday night, February 1, 2025, Liam went to a restaurant and then a dance bar called *Le P'tit Caribou* in Mont-Tremblant, Quebec. At 2:30 AM, his friends went back to their hotel room at *La Tour des Voyageurs II*. Liam stayed behind for a bit, then walked toward the hotel at 3:10 AM. Security cameras showed him talking nicely to two hotel workers at 3:20 AM. He wasn't scared or hurt. Right after that, he walked around the side of the hotel and disappeared into a area where there were no security cameras. In March, when the snow melted, a worker found his wallet in a nearby parking lot, but no other signs or clues have ever been found.

Timestamp	Location / Camera Node	Observed Movement / Event	Witness / Source	Reliability
11:00 PM (Feb 1)	Pedestrian Village Restaurant	Dinner with 2 friends; active family texting	Friends & Parents	High (Confirmed)
12:00 AM (Feb 2)	Le P'tit Caribou Bar	Socializing at venue	Friends & CCTV	High (Confirmed)
2:30 AM	Bar Departure	2 friends leave for La Tour des Voyageurs II	Friends Interview	High (Confirmed)
3:00 AM	Le P'tit Caribou Exit	Liam leaves venue alone	CCTV Security Feed	High (Confirmed)
3:10 AM	Chemin Curé-Deslauriers	CCTV Ping #1: Walking briskly toward hotel	Village CCTV Network	High (Confirmed)
3:16 AM	Cellular Network Ping	Outbound text: 'Meet me outside' (sent to dad)	Telecommunication Log	High (Digital)
3:20 AM	La Tour des Voyageurs II	CCTV Ping #2: Conversation with 2 resort workers	Hotel CCTV & Workers	High (Confirmed)
3:22 AM	Chemin au Pied-de-la-Montagne	Terminal movement around side of hotel (camera blindspot)	CCTV Coverage Boundary	High (Last Sighting)
March 22, 2025	Hotel Parking Lot	Wallet (ID & keycard) recovered during spring melt	Resort Employee / Police	Physical Evidence

MOVEMENT DOSSIER: LIAM GABRIEL TOMAN

MONT-TREMBLANT, QC | DISAPPEARANCE PROFILE & SAR TRAJECTORY MATRIX

DATE: FEB 2025 / SAR REVISION

STATUS: ACTIVE MISSING PERSON ($50K REWARD)

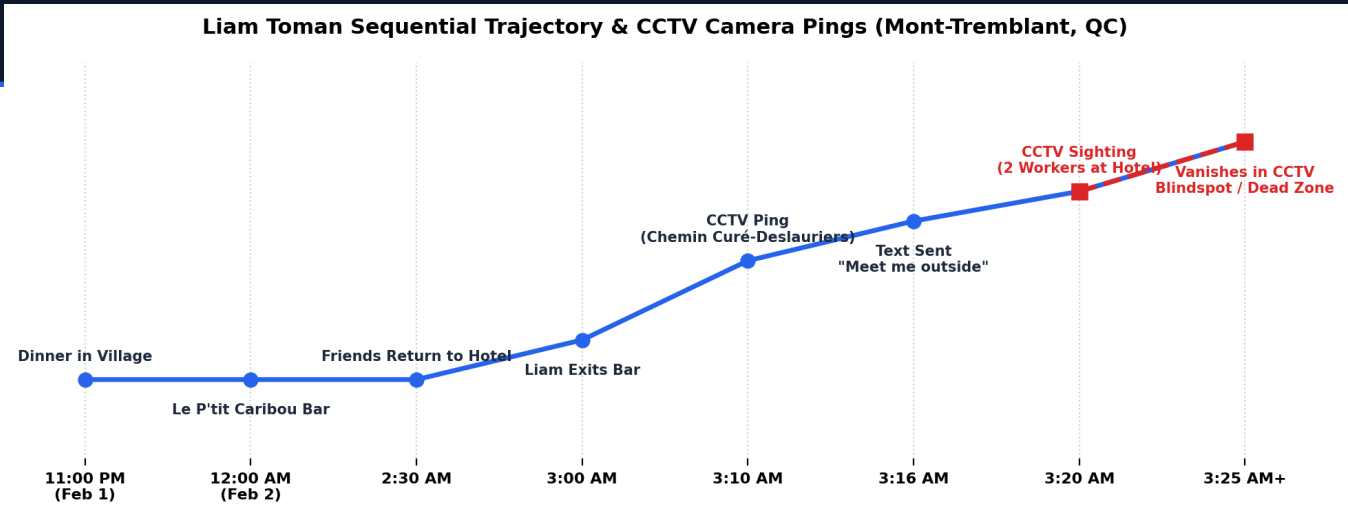

Figure 1.1: Sequential Timeline & CCTV Camera Sighting Trajectory for Liam Toman.

2. CELLULAR TELEMETRY & TELECOMMUNICATION MATRIX

3:16 AM Cellular Ping & Tower Dynamics: Liam's mobile device logged its final active network transmission at 3:16 AM when an outbound SMS ('Meet me outside') was dispatched. In alpine resort topography, cellular towers cover a broad transceiver radius (up to 10–15 km). The network handshake confirmed the phone was active in the Mont-Tremblant pedestrian zone sector.

Local Stationarity vs. Dead-Zone Loss: Following 3:20 AM, all network handshakes, app traffic, and cellular updates ceased abruptly. This sudden termination aligns with two primary technical models: (1) Total device destruction or battery depletion within a local terrain trap (e.g., snowpack, creek, or drainage basin), or (2) Immediate transition into an uncovered mountain topography dead zone along an egress route.

3. REMOTE SENSING & PHYSICAL ARTIFACT PROFILE

Parameter Category	Physical & Technical Specifications	SAR Detection / Computer Vision Target
Subject Profile	Liam Gabriel Toman (Age 22, 5'9", 130 lbs)	Osteological / Human Frame Constraints
Outerwear Outer Layer	Black Volcom Coat with Brown Spots	HSV Color Filter: High Contrast Patterning
Pants & Headwear	Black Snow Pants, White Hat with Dark Stripes	LiDAR Bare-Earth Anomaly / Contrast Object
Footwear & Shirts	Brown Work Boots (Black Rubber Toes), Green/Plaid Shirts	Visual Anomaly / Taphonomic Scatter Target
Recovered Artifacts	Wallet with Government ID and Keycard (Found March 22)	Spring Snowmelt Perimeter Mark
Unrecovered Items	Cell Phone, Black Volcom Jacket, Boots, Hat	Active Subsurface / Terrain Trap Targets

4. INTERACTIVE FIELD & WEBAR DEPLOYMENT ASSETS

Standardized Field Deployment Package: In accordance with the SAR Movement Dossier Standard, all geospatial coordinates, CCTV camera blindspots, and snowmelt discovery zones have been packaged into deployable field assets:

• **WebAR Configuration File:** `webar-3d-scene-config.json` pre-loaded with Mont-Tremblant pedestrian coordinates.

• **3D Elevation Profile:** Bare-earth LiDAR terrain models tracking drainage catchments near Chemin au Pied-de-la-Montagne.

• **GIS Placemarks:** Exportable `.kml` layers for QGIS, ATAK, and mobile SAR navigation.
